CPT codes 00811-AA through 00811-QZ are allowable anesthesia codes with the relative value per unit of 4. CPT codes 00812-AA through 00812-QZ are allowable anesthesia codes with the relative value per unit of 3. Codes 00811-AA through QZ are calculated using the following formula. One unit of time (15-minute intervals/unit + the relative value of 4 x the conversion factor of CPT codes 00811at \$20.79/unit.

Formula: RVU+ unit of time (15 min increment/unit) x Conversion factor

Example: Anesthesia services performed by an anesthesiologist (CPT code 00811-AA). The anesthesia was administered for 30 minutes which is 2 units of time. Example Equation for this scenario is as follows: $2+4 \times 20.79 = \$124.74$

Codes 00812-AA through QZ are calculated using the following formula. One unit of time (15-minute intervals/unit + the relative value of 3 x the conversion factor of CPT codes 00812 at \$20.79/unit.

Formula: RVU+ unit of time (15 min increment/unit) x Conversion factor

Example: Anesthesia services performed by an anesthesiologist (CPT code 00812-AA). The anesthesia was administered for 30 minutes which is 2 units of time. Example Equation for this scenario is as follows: $2+3 \times 20.79 = \$103.95$

See addendum to What's Covered on page 8 of this document for guidance regarding reimbursement for each of the anesthesia modifiers below based on provider type.

Initiative Billing Details

Provider fee for multiple endoscopy codes per procedure:

The Initiative will follow CMS rules for provider fee billing of multiple endoscopy codes per procedure. Only codes listed on this document from 45378 through 45398 will be considered for reimbursement. Guidelines for billing of codes not within the same family include the following:

• When the same Physician performs more than one surgical service at the same session, the allowed amount is 100 percent of the surgical code listed in this document with the highest reimbursement rate. The allowed amount for the subsequent surgical codes is based on 50 percent of the allowed amount as listed in this document.

Guidelines for billing when the codes are within the same family include the following:

- Identify if the billed codes are the same Endoscopic Base Code (using the Physician Fee Schedule Payment Policy Indicator File).
- Pay the full value, as noted on this document, of the highest value endoscopy (if the same basis is shared), plus the difference between the next highest and the base endoscopy.

Billing APC and ASC codes when multiple codes per procedure occur:

- The Initiative will follow CMS guidelines for billing of APC codes when multiple codes per procedure occur. The CPT code with the highest reimbursement rate will be billed at 100% of the listed reimbursement rate on this document and 50% of the reimbursement rate thereafter for any additional codes.
- The Initiative will follow CMS guidelines for billing of ASC codes when multiple codes per procedure occur. The CPT code with the highest reimbursement rate will be billed at 100% of the listed reimbursement rate on this document and 50% of the reimbursement rate thereafter for any additional codes.

Monitored Anesthesia:

- Use of monitored anesthesia care is considered **not medically necessary** for colonoscopy procedures in patients of average risk related to use of anesthesia and sedation and will not be reimbursed by the Initiative.
- The Initiative will follow CMS guidelines for monitored anesthesia. Monitored anesthesia will be reimbursed by the Initiative only under specific circumstances as noted below:
 - Use of monitored anesthesia care may be considered medically necessary for colonoscopy procedures only when there is documentation by the Proceduralist and Anesthesiologist that one or more of the following specific risk factors or significant medical conditions are present:
 - Prolonged or therapeutic endoscopy procedure requiring deep sedation, or
 - Increased risk for complications due to severe comorbidity (ASA class III or greater), or
 - Morbid obesity (BMI >40), or
 - Documented sleep apnea, or
 - Inability to follow simple commands (cognitive dysfunction, intoxication, or psychological impairment), or

- Spasticity or movement disorder complicating procedure, or
- History of or anticipated intolerance to standard sedatives, such as
 - o Chronic opioid use
 - o Chronic benzodiazepine use, or
- Patients with active medical problems related to drug or alcohol abuse, or
- Acutely agitated uncooperative patients, or
